KML Support for MIMS

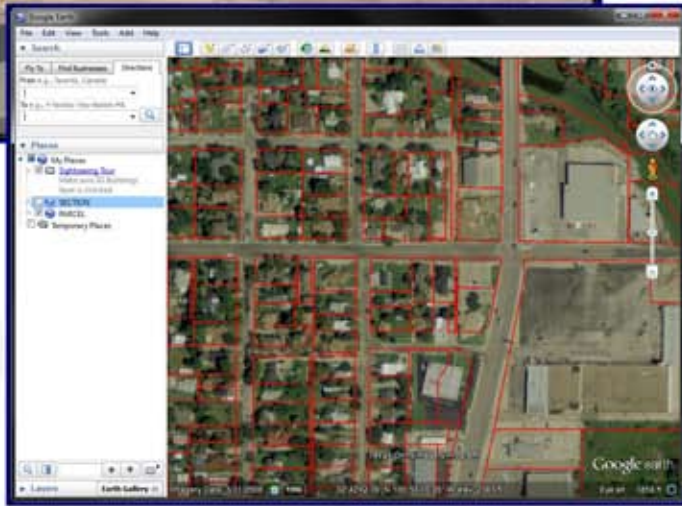

More Ways to View Your Maps!

KML files were developed for viewing in Google Earth. With KML Support for MIMS you can view your MIMS layers in other mapping programs that support KML files such as Google Earth.

Enjoy the powerful features of Google Earth combined with all of your layers from MIMS!

- See your MIMS maps in Google Earth
- Take advantage of Google's extensive aerial imagery
- View Google Earth with MIMS maps on an unlimited number of computers
- Distribute your MIMS data in the KML format, making it easy for others to view
- Have the option to put your data online for the public.

View Your Maps On Mobile Devices

View your maps in the field and take advantage of the GPS in your mobile device by viewing KML files with the Google Earth app on mobile devices including:

- iPads
- Android Tablets
- iPhones and Android Phones
